

# AUTOMATED VULNERABILITY DETECTION

PRESENTED BY

P Chinni Krishna Kowsik

H Uday Reddy

# Objectives

- **Identify the challenges of automated vulnerability detection in code.**
- **Review the state-of-the-art techniques for automated vulnerability detection in code.**
- **Propose a new approach to automated vulnerability detection in code using deep representation learning.**  
**tools : DeepCover, VulnPredict, Fortify SCA, Valgrind.**
- **Evaluate the proposed approach on a dataset of known vulnerabilities.**

# Problem Identification

## problem # 1

The problem of false positives.

## problem # 2

Traditional approaches to automated vulnerability detection are not scalable to large codebases.

## problem # 3

Automated vulnerability detection only covers a limited number of vulnerabilities.

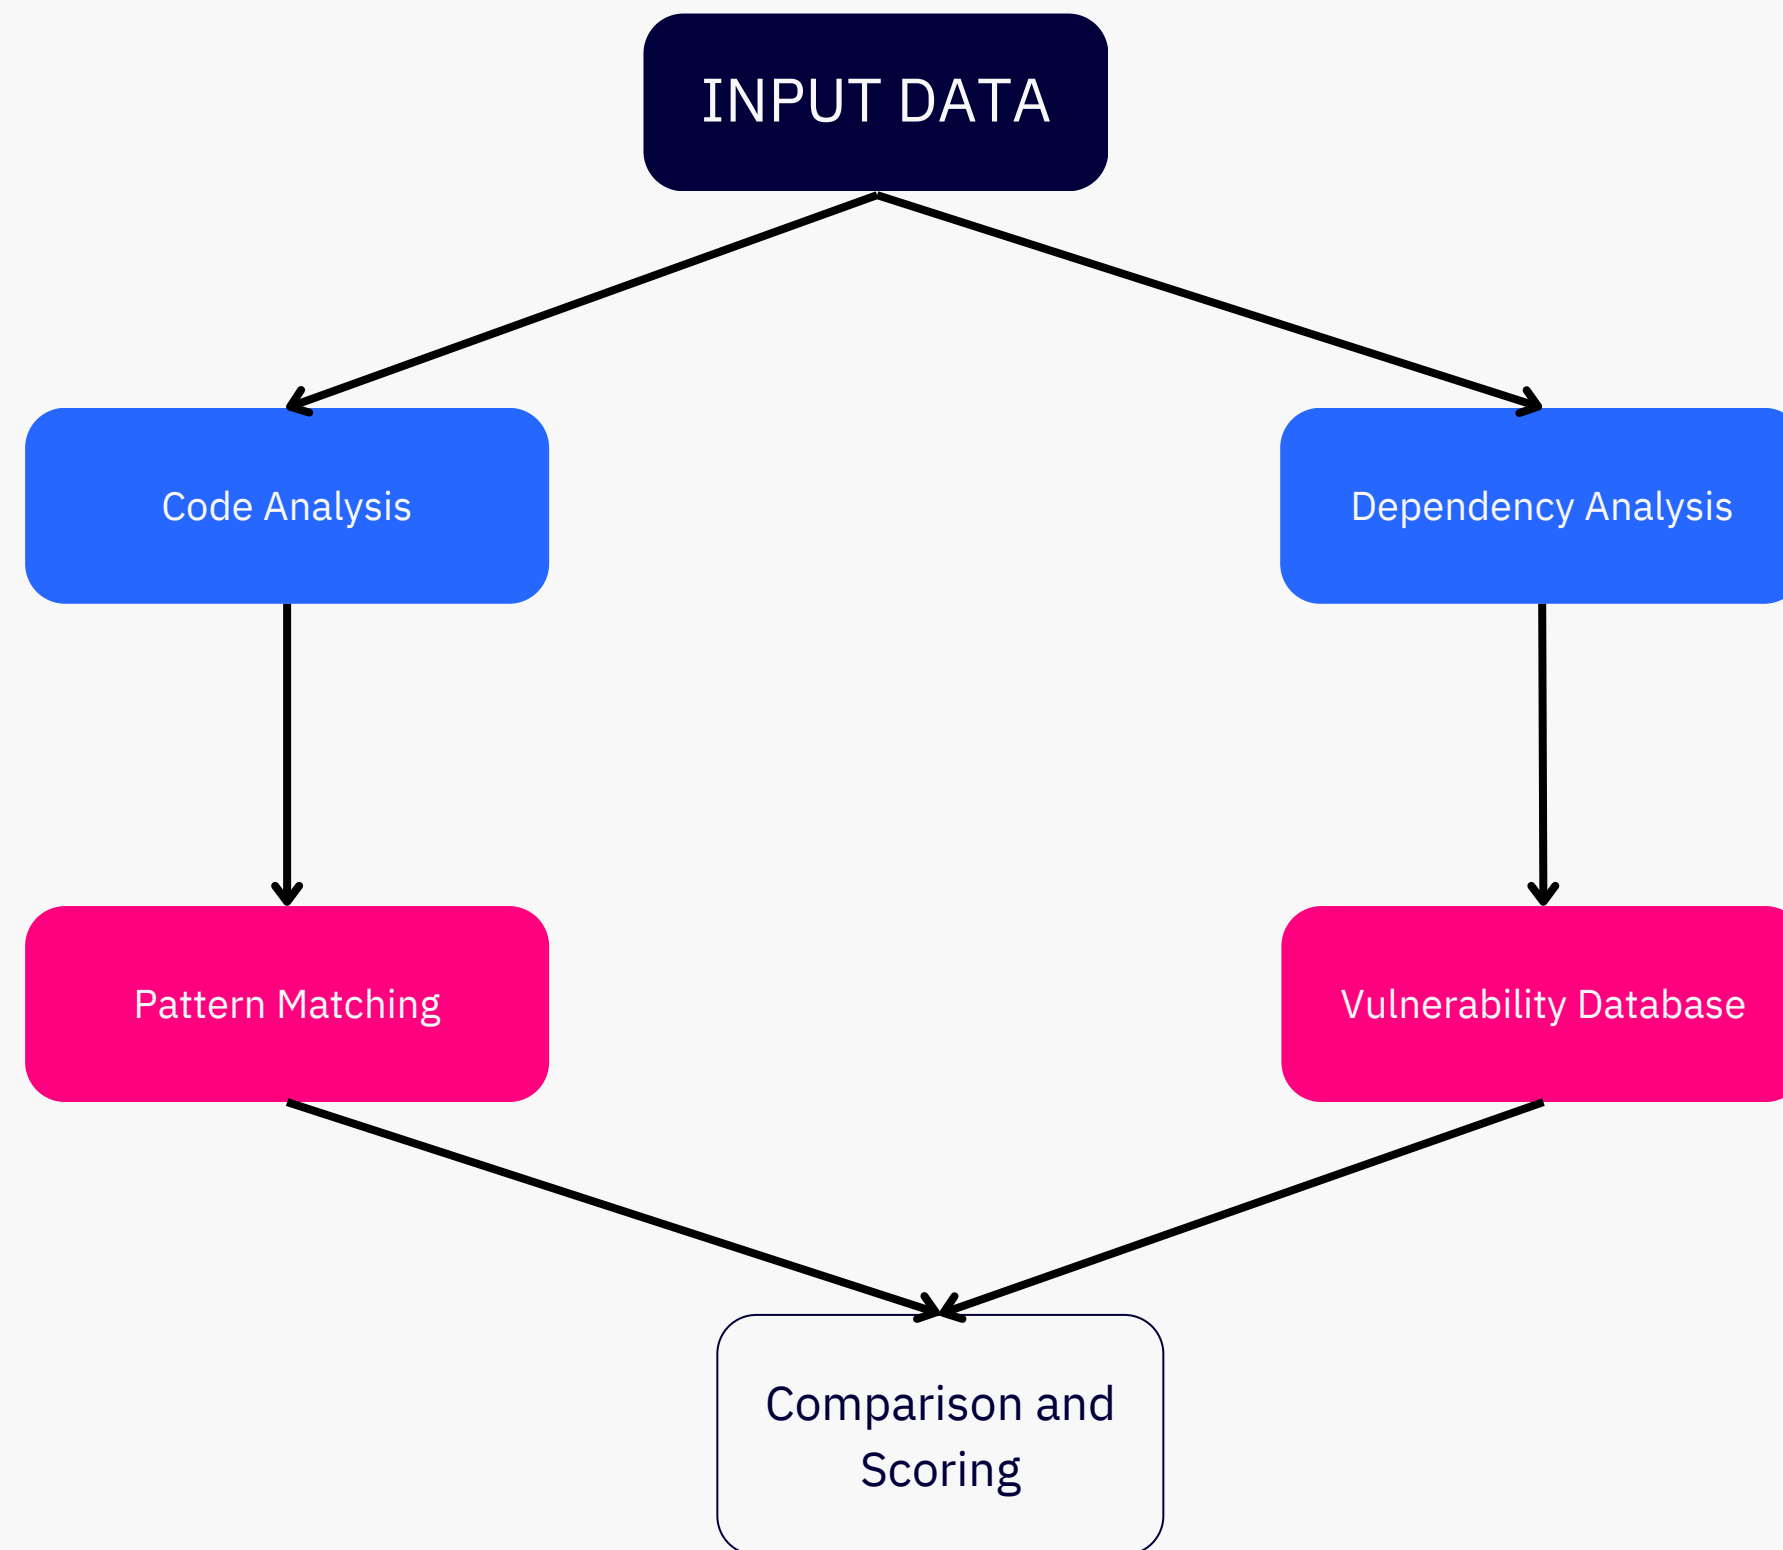

# Project Statements

- The problem of software vulnerabilities, limited coverage of existing vulnerability detection tools
- The problem of scalability of existing vulnerability detection tools
- The problem of data-driven vulnerability detection
- Using deep learning for vulnerability detection
